列表
创建一个列表
list = [1,2,'python','java']
list = []
friend=list(list)
list.append('HDD')
list = [1, 2, 'python', 'java']
list = [1, 2, 'python', 'java', 'HDD']
list.append('Seagate', 'Western Digital')
list = [1, 2, 'python', 'java', 'HDD', 'Seagate', 'Western Digital']
list = [1, 2, 'python', 'java', 'HDD', 'Seagate', 'Western Digital']
list.insert(1,'a')
list = ['a', 1, 2, 'python', 'java', 'HDD', 'Seagate', 'Western Digital']
删除
list.remove('Western Digital')
list = [1, 2, 'python', 'java', 'HDD', 'Seagate']
list.extend(["",])
list = [1, 2, 'python', 'java', 'HDD', '']
del list[5]
del list
list = [1, 2, 'python', 'java', 'HDD']
list.pop(0)
list = ['python', 'java', 'HDD']
修改
list[1]=2
list = [1, 2, 'python', 'java', 'HDD']
list[0]='python'
list = ['python', 'java', 'HDD']
查找
>>> list[1]
'python', 'java'
>>> list[0:2]
['python', 'java', 'HDD']
>>> list[2]
'python', 'java', 'HDD']
>>> list[2]
['python', 'java', 'HDD']
>>> list.index('Seagate')
>>> list.index('Seagate', 0, 3)
>>> list.index('Seagate', 0, 2)
Traceback (most recent call last):
File "<pyshell#9>", line 1, in <module>
list.index('Seagate', 0, 2)
ValueError: 'Seagate' is not in list
>>> list.index('Seagate', 0, 3)
>>> list.count('HDD')
>>> list.count('Seagate')
>>> list.count('Seagate')
>>> list.count('Seagate
